***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-47, drawn to a method of analyzing data from a hybridization experiment, classified in class 702, subclass 20.
- II. Claims 48-63, drawn to a method of assigning probes to subblocks of an array, classified in class 707, subclass 7.
- III. Claims 64-105, drawn to a method of selecting sequence lengths for probes to be hybridized to an array, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are independent and distinct, each from the other, as each is drawn to a differing method. Each method comprises differing method steps, utilizing differing data and information, to achieve differing goals. As such, each method would require differing searches in substantially non-overlapping art areas. Therefore, search of all three separate and distinct inventions would pose a serious burden upon the examiner.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1631

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
